

COMMUNIQUÉ

February 15, 2013

Dear valued customer,

General Dynamics OTS Canada wishes to reassure all Simunition® customers regarding the safety of its products and suitability for use.

We would like to draw your attention to the fact that Simunition® FX® marking cartridge products were first developed for the US market where, under OSHA (American Health and Safety) regulations, hearing protection only becomes mandatory for exposure to peak pressure values exceeding 140dB. Based upon tests performed in accordance with MIL-STD-1474D, General Dynamics OTS Canada informed its US clients that, it is not strictly necessary to wear hearing protection when conducting training with FX® marking cartridges.

It should be noted, however, that slight variations in noise level may occur due to weapon type, barrel length and training environment. Therefore, when in doubt, use appropriate hearing protection when possible.

Foreign jurisdictions may have different requirements reflected in local regulations and our clients must ensure compliance with the applicable regulations within their respective jurisdictions.

We remind you that the use of appropriate hearing protection during training is a simple way to ensure the optimal protection of your employees regardless of any applicable legislative requirements.

For any questions please do not hesitate to contact us at: info@simunition.com
