

SIMUNITION®

TRAINING FOR THE REAL WORLD®

Reduced Energy - Non-Lethal - TOXFREE®

WORLD LEADER IN REALITY-BASED TRAINING

Simunition® is the pioneer and world leader in providing military and law enforcement communities with the most realistic and safe force-on-force short range training system.

- > The world's most comprehensive and tested force-on-force short range training system.
- > Military and Law Enforcement communities around the world have placed their trust in Simunition® to deliver realistic training.
- > Professionals whose lives depend on the best training possible know that they can always count on Simunition® to provide them the most comprehensive and effective training system.

The Simunition® training system is comprised of the FX® marking and SecuriBlank® low-energy munitions, weapon conversion kits and personal protective equipment. All three essential components are supported by a comprehensive Simunition® Scenario and Safety Certification Training Course. General Dynamics Ordnance and Tactical Systems is the first and only manufacturer to have fully designed and qualified the safety and reliability for all three essential components of the Simunition® FX® force-on-force training.

DEDICATED TO MEET USER EXPECTATIONS

Simunition® provides a complete line of ToxFree® primers (lead and heavy metal free) for both the FX® and SecuriBlank® reduced-energy training rounds.

AS REAL AS IT GETS... ...WITH FX® MARKING CARTRIDGES

FX® "Special Effects" is the original interactive, scenario-based firearms training system designed by General Dynamics Ordnance and Tactical Systems for the ultimate level of realism. The FX® Marking Cartridges are available in multiple colors to distinguish hits from multiple users and are denoted by a water soluble compound that is easily cleaned with a damp cloth. These deformable non-lethal force-on-force training rounds are available in various calibers. FX® training is affordable, adaptable and can be performed practically anywhere and it reduces inherent training scars that other systems may inflict. FX® Marking Cartridges use non-metallic, non-lethal marking projectiles. On impact, FX® projectiles will deform and provide maximum marking on the intended target.

SIMUNITION®

SIMUNITION® WEAPON CONVERSION KITS

General Dynamics Ordnance and Tactical Systems has developed an extensive range of Simunition® weapon conversion kits for the law enforcement and military markets. These conversions allow users to fire the reduced-energy cartridges (FX® and SecuriBlank®) from their service weapons in single shot, burst or full automatic mode. They are designed to help diminish the possibility of firing live, lethal ammunition, ensuring proper operation and cycling of the weapon. Kits range from a simple drop-in barrel/bolt to a complete Simunition® dedicated training weapon. Visit our website at www.simunition.com for a complete description of all kits available.

SAFE TRAINING WITH FX® 9000 SERIES PROTECTIVE EQUIPMENT

Since FX® Marking projectiles generate an impact awareness when they hit, the FX® 9000 series of Protective Equipment was developed to mitigate training risks. Comfortable and lightweight, each piece of protective gear allows the participants to move naturally during force-on-force training exercises and decide how much, if any, additional equipment is required beyond the mandatory head, throat and groin protection. Visit our website at www.simunition.com for a complete overview of all FX® 9000 Series Protective Equipment.

TRAINING FOR THE REAL WORLD®

Simunition® offers FX® Scenario instructor and Safety Certification Training Courses which are designed to prepare law-enforcement, military and tactical teams to safely use FX® Marking and SecuriBlank® Cartridges, Weapon Conversion Kits and Protective Equipment. The FX® Training Courses are taught by Simunition® certified instructors and recreate reality-based situations. They allow trainees to use their own converted service weapons in realistic, force-on-force exercises against active role-players. Check the Simunition® website at www.simunition.com for more details on how to register.

SAFE AND SOUND...WITH SECURIBLANK®

SecuriBlank® is the latest product in the reduced-energy family. SecuriBlank® cartridges are available in two models, Loud and Quiet, in both 5.56mm and 9mm calibers. It is based on the design of the FX® but requires no Protective Equipment other than approved safety glasses and with approved hearing protection for the SecuriBlank® Loud. These "safer" blanks function with most Simunition® conversion kits and have a safety distance of only one meter for the SecuriBlank® Loud, and 0 meters for the SecuriBlank® Quiet!

SecuriBlank® was designed for use with interactive video-based simulator systems and laser-based battle training systems. All of our SecuriBlank® cartridges are 100% ToxFree®.
